

BGE-4000 SERIES

ADVANCED FILTRATION TECHNOLOGY

The Aquamor Foodservice line of filters contains a variety of substrates acting as scale inhibitors; greatly reducing the mineral deposits in treated water and providing an exponentially cleaner drinking experience. Our high-quality blocks provide tremendous capacity to reduce impurities such as chlorine taste and odor as well as sand, silt, sediment, and rust which may be present in your drinking water. Our patented scale inhibitor media reduces the accumulation of minerals that lead to hard water deposits from lime and scale build-up on equipment. These processes ensure that you are getting the cleanest and best tasting water possible. The Foodservice line provides superior protection for your office coffee and Insta-hot appliances, reducing downtime and unnecessary maintenance, and extending the life of your appliances. Aquamor Foodservice filters are economical and will provide you superior protection in any beverage or food equipment application.
